

ISSUE: DataGridView in User Control

Description: Using DataGridView in User Control where the datasource comes from querying a Sqlite database using Microsoft Entity Framework.

Documentation:

Main Issue When Reusing the User Control, Causes Issue such as disappearing in the form placed in and more issue when used.

Recreate Issue:

Using the Demo Winform project, Copy all code from Form1 to a new user control (change the class name to original user control), create new form and place the created user control from toolbox, run the new form in program.cs

Commented OnClosing() on usercontrol, do not work inside usercontrol.

```
        this.categoryBindingSource.DataSource = this.dbContext.Categories.Local.ToBindingList();
    }
    /*
    protected override void OnClosing(CancelEventArgs e)
    {
        base.OnClosing(e);

        this.dbContext?.Dispose();
        this.dbContext = null;
    }
    */

1 reference
    private void dataGridViewCategories_CellContentClick(object sender, DataGridViewCellEventArgs e)
    {
```
